AI Appreciate Badge - AI untuk Rakyat

# Lee Jian Lin

Software Developer | Fullstack Freelance Developer
Johore, Malaysia

## Experience

### eco-shop Malaysia

1 year 9 months

#### Software Developer

July 2025 - Present (1 year 4 months)
Segamat, Johore, Malaysia

Delivered ERP integration and automation for a multi-country NetSuite rollout, working with business users and ERP consultants from requirements to hypercare.

ERP Go-Live & Multi-Country Integration

• Supported technical go-live, keeping daily data stable and tallied between the new and legacy ERP
• Built multi-country ERP integrations and daily reconciliation

High-Volume Transaction Redesign

• Redesigned transaction documents flows for 450+ outlets after huge documents volume broke NetSuite’s GL impact calculation
• Moved routine outlet orders to a custom TO Request form feeding NSAW reporting
• Converted daily shipments into standard TOs with direct fulfillment, batched at 500 item lines with outlet codes nested in each line’s JSON
• Cut daily TO documents from 500+ to under 100
• Load-tested NetSuite with production data cloned across multiple locations

Integration Platform

• Split the core integration API into a shared class library and an API layer, so all tools share one codebase
• Built a developer portal for API user registration, reconciliation and monitoring
• Built a configurable API caller: a stored procedure supplies the request URL and body, with OAuth 2.0 or TBA auth and sync or async mode set by config
• Built a poller for async results and a job scheduler replacing Windows Task Scheduler with retries, timeouts and run history

AI-Assisted Development

• Fed project context and coding conventions through markdown files
• Ran subagents in parallel: one implements while the main session plans and reviews
• Usage of AI plugins for planning, workflows and UI design

System Support
• Resolved issued tickets: set up users, permissions and approval workflows, fixed access issues and worked with the vendor on custom features
• Supported UiPath bots post-go-live

### Information Technology Intern
February 2025 - July 2025 (6 months)
Jementah, Johore, Malaysia

Supported enterprise-wide digital transformation through API integration and RPA automation, connecting upstream ERP systems with downstream platforms including WMS, B2B, POS and legacy ERP.

API & ERP Integration
• Designed and developed C# / .NET APIs (Entity Framework, SQL Server) for master and transactional data, including stock adjustments, transfer orders (IF/IR), purchase returns, inventory transfers, item fulfillment and shipment closures
• Built JSON request/response handling, token-based authentication and business rule validation across multiple regional ERP systems
• Supported both real-time REST API integration and scheduled batch processing, with a focus on data accuracy and traceability

Database Development
• Created and optimized stored procedures and functions, including performance tuning for legacy ERP systems
• Implemented error logging and data recovery mechanisms to protect data integrity
• Wrote SQL scripts in SSMS for data validation, reconciliation and operational reporting

RPA Automation (UiPath)
• Developed unattended bots for scheduled production runs and attended bots for ad-hoc tasks, reducing manual work on repetitive ERP processes
• Implemented smart file handling and modular automation components, and resolved UI element conflicts so bots ran reliably across environments

Collaboration & Delivery

• Worked with business users, ERP functional consultants and IT teams to turn business requirements into technical solutions

• Supported SIT and UAT, adapting quickly to changing requirements in an Agile environment

• Used Git with structured branching for version control and code traceability

• Documented API architecture, RPA workflows, technical SOPs and recovery procedures to support future maintenance

## FiLLiP Group

2 years 10 months

### Freelance Web Developer

January 2024 - October 2026 (2 years 10 months)

Federal Territory of Kuala Lumpur, Malaysia

I serve as a web developer freelancer and developed official websites for Fillip Sdn.Bhd. Website.

Website Link: https://fillip-group.com/

### Freelance Translator

February 2024 - March 2024 (2 months)

Federal Territory of Kuala Lumpur, Malaysia

Translate documents from English to Malay and also Chinese to English. Collaborate with clients to ensure accurate translation and meet tight deadlines.

## Shopee

### Ecommerce Business Owner

November 2017 - September 2026 (8 years 11 months)

Johore, Malaysia

I am running and organizing an e-commerce shop (ytlin2ndLifeTech) that sells IT based components and services.

## Lazada

### Ecommerce Business Owner

November 2017 - September 2026 (8 years 11 months)

Johore, Malaysia

I am running and organizing an e-commerce shop (ytlin2ndLifeTech) that sells IT

based components and services.

### CGS International Securities Group
Freelance Web Developer
March 2025 - May 2025 (3 months)
Malaysia

Designed and developed the official website for the ASEAN Investment Challenge 2025, ensuring a responsive, user-friendly interface across all devices.

Implemented front-end design to support event information, and content updates.

Managed website hosting and deployment, ensuring reliable uptime and performance.

Collaborated closely with event organizers to reflect the brand identity and deliver a seamless user experience.
